THE 5% PROBLEM

Most QA teams review 5% of conversations. The other 95% is where compliance fails and coaching opportunities hide.

QAScope scores every customer interaction against your rubric, flags compliance violations and low-scoring agents, and gives team leads a prioritized review queue with SLA-tracked auto-approve. Built by an ex-BPO operator for SMB BPOs in India.

- HOW IT WORKS
- 1 Upload conversations

Upload a CSV from any source — Genesys, Five9, Zendesk, Excel exports. Auto-detect maps your columns to QAScope fields. Voice, email, chat all supported.
- 2 AI scores against your rubric

Every conversation graded on 7 weighted criteria + your project-specific fatal rules (e.g. PII verification, RBI compliance). Confidence scoring + a coaching note per agent.
- 3 Two-tier human review

Anything flagged for compliance or low confidence lands in a review queue with a configurable SLA. Team lead agrees or escalates. Auto-approves if not actioned in time.

- WHAT YOU GET
- Manager dashboard

30-day KPIs, top/bottom agent leaderboards, by-team rollup, by-channel split, status mix, appeal correction rate.
- Saved report templates

Build a custom report once via plain English (“agents below 70% in Mumbai this week”). Re-run it forever, free.
- Bring your own LLM

Works with OpenAI, OpenRouter, Together AI, Groq, Azure, or any OpenAI-API-compatible endpoint. Your key, your tokens, transparent cost in the dashboard.
- Multi-tenant + RLS

Postgres row-level security at the database. Your data is invisible to every other workspace.

Configurable review SLA

PRICING · ALL PAID TIERS BYO LLM KEY

	Pilot	Starter	Team	Pro
Conversations / month	500	Unlimited	Unlimited	Unlimited
Seats included	1	1	3	5
LLM cost	We cover	BYO	BYO	BYO
Custom rubric + fatal rules	✓	✓	✓	✓
Saved report templates	—	✓	✓	✓
Multi-rubric (multi-campaign)	—	—	—	✓
First CRM integration	—	—	—	✓
Price (INR / month)	Free	₹6,999	₹14,999	₹29,999

Additional seats: ₹2,999/seat/month (₹2,499 on Pro).

Built by Bonison Vinod, ex-Operations Manager, who got tired of QA teams reviewing 5% of calls and missing 95% of risk. Fellow operators who tested an early version called it “the QA tool I’d build if I had time.”
